

Receiver Signal loss when saved bank or when open Log two times ?
Initialisation of the swashplate visible ! Why ? Bug ? Defective ?

Here are some logs on the workbench – The errors can not be deleted by looking at the logs -
The mistakes are reproducible, if you go two times in the log, the swashplate initialises and you get
an new entry in the log (Receiver Signal Lost), that's visible if you go then a second time in the log
(no swashplate movement) ! If you do nothing you can see in the log that all is fine – I don't
understand what's going on – This heli wasn't crashed any time !
